

Assignment No. 1

Name: Viraj Harishchandra Khod

PRN: 202501040065

Division: CS1

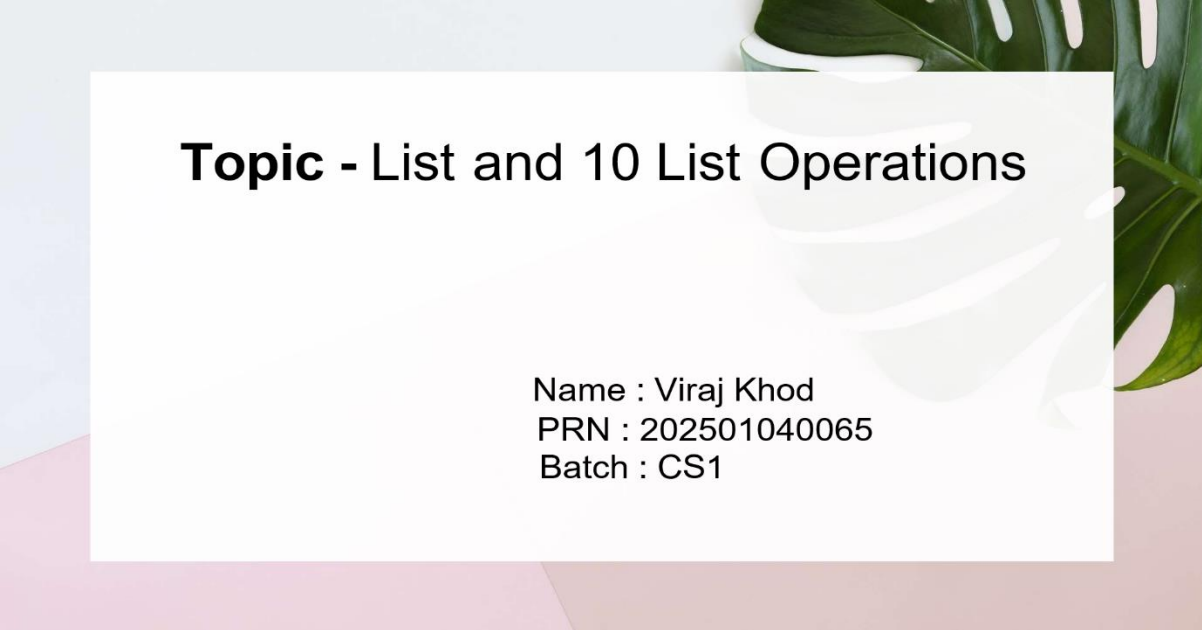

Batch: C14

Course: Essentials Of Data Science

Title: Video Making on Python Basics Concepts

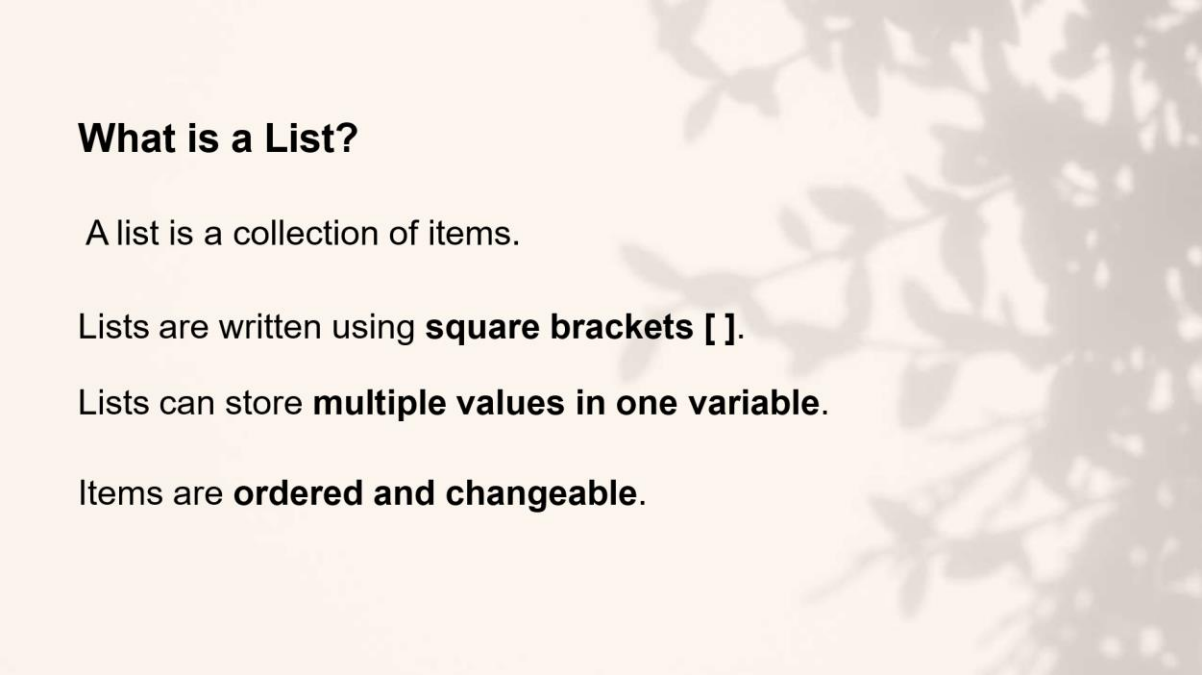

Topic: List and 10 List Operations

PPT Presentation:

Topic - List and 10 List Operations

Name : Viraj Khod
PRN : 202501040065
Batch : CS1

What is a List?

A list is a collection of items.

Lists are written using **square brackets []**.

Lists can store **multiple values in one variable**.

Items are **ordered and changeable**.

List Operations

Accessing list elements

1. Indexing

```
fruits = ["apple", "banana", "mango"]  
print(fruits[0])
```

2. Negative Indexing

```
print(fruits[-1])
```

Adding Elements

3.append()

```
fruits.append("orange")
```

4.insert()

```
fruits.insert(1,"grapes")
```

Removing Elements

5.remove()

```
fruits.remove("banana")
```

6.pop()

```
fruits.pop()
```

Other Operations

7.len()

```
len(fruits)
```

8.sort()

```
fruits.sort()
```

More Operations

9.reverse()

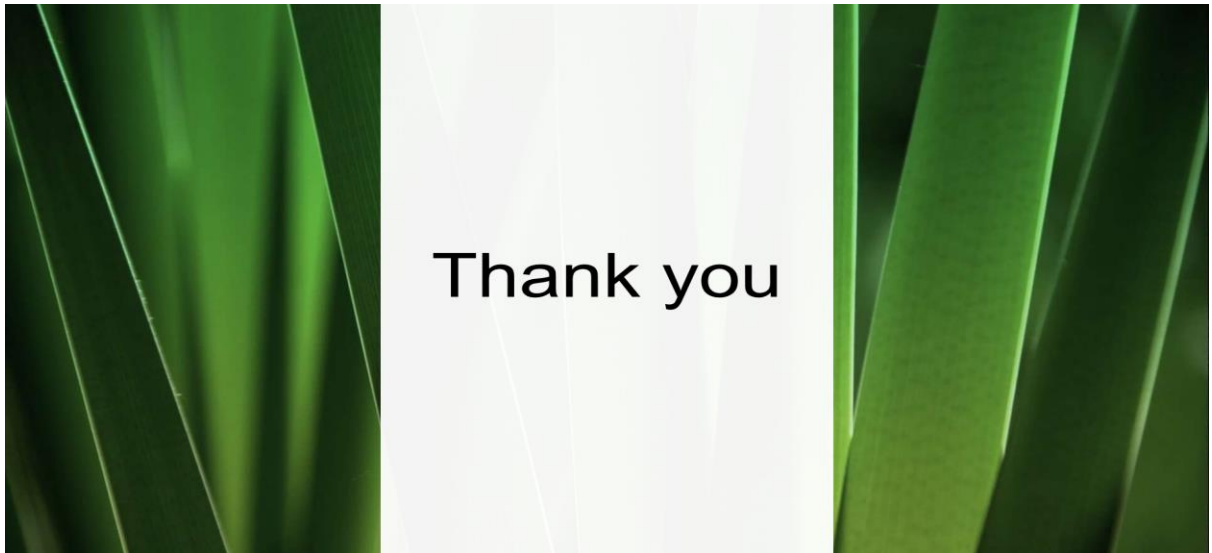

```
fruits.reverse()
```

10.clear()

```
fruits.clear()
```

CONCLUSION

Python lists are very useful for storing and managing multiple values. They allow different types of data and provide many operations to modify list elements. The operations such as append, insert, remove, pop, len, sort, reverse, and clear make lists powerful and flexible for solving programming problems.
